

Name: King Enricho S. Saga

Section: A224

Answer the reflection questions:

A. How did HTML, CSS, JavaScript help you build your portfolio, and what challenges did you face?

- HTML is used to be the canvas of your entire project, while CSS is the tools that you prepare to create art or any drawing in general, lastly JavaScript is the movement of your hands to create said art.
- So far I haven't had any challenges other than the thought of what I could add more and how I could improve on my portfolio.

B. What did you learn from publishing your portfolio on GitHub Pages?

- I learned how to edit the elements in the code and I can envision I want to add in the future of my portfolio, and hopefully throughout the course I can learn how to make mock up websites to use professionally in my career and maybe in a future business.
